

# Week 10 Journal

Rodger Byrd

## I. JOURNAL ENTRY

This week finalized and submitted the survey paper on code smells and submitted my AWS video.

### *A. Most Significant Learning Experiences*

Generally this class provides a very good and broad overview of academic research and I found it to be very thorough and helpful.

One of the things I found very interesting was in reading papers creatively not just critically. It changed my mindset while reading papers.

I found the statistics and experiment design to be very helpful. My advisor asked me previously to perform some T-tests as part of my graduate thesis, and I had no idea what they were. Being able to show that the results from your experiments are meaningful is a critical item in research. I found your overview of these sections very helpful and it was one of the things I had hoped to get out of the course.

### *B. Least Significant Learning Experiences*

I think most people who are grad students in computer science should know how to use git so I found that to be mostly review.

The files for this latex document are in the github repository located at <https://github.com/rodger79/CS6000>
