

# Week 2 Journal

Rodger Byrd

Choose a top journal or conference in your field with  $\geq 45$  papers one or two 2018/2019 issues. (DO NOT search for papers with keywords.. but can search for journals/conf title).

## I. PROCESS

The first section in the journal should discuss your process and your learning about the process (do not discuss the content of the papers).

For this Journal, I used Zotero to track all of my bibliography entries and notes. It was significantly faster and easier than what I did in Journal 1. For the "top" journal I chose IET Information Security [1]. It had 5 issues in 2019 with 10-12 articles per issue. My field of study is related to both Compute Science and Computer Security so I thought this would include relevant papers for me to read. My process included 3 phases. First, quickly browse each paper using my phone as a stopwatch to determine if I wanted to scan or trash the paper with a note about why. Secondly, I did a 5-10 minute scan of the papers chosen in phase 1 to determine if I wanted to critically and creatively read them. Lastly, I chose the best 2 papers and read them tracking my notes. The notes are included in the next section.

## II. RAW NOTES

The second section is your raw notes from critical/creative reads as a latex document, and include all the papers in the references. Not expecting/wanting full sentences, grammar, want your raw notes. If you use handwritten notes, you can take pic and include them as figures.
