

# Week 8 Journal

Rodger Byrd

## I. OVERVIEW

For my area I'm looking at Anti-Patterns in code, these are also known as code smells. I've also seen them referred to as Atoms of Confusion and nano patterns.

## II. JOURNAL ENTRY

This week I continued working on the draft paper. After my first draft, I realized that the training of the machine learning algorithms is an important aspect to cover, and I'll have to redo some sections based on that. Also, I think I could have gone into more detail on many of the papers so I'm working on rereading some of the cited papers to do that.

I reviewed one of the 2 papers assigned "Promoting Collaborative Critical Infrastructure Defense in a Changing World" by Jennifer Smith, but I had problems with canvas. The other paper that came up for me was "Survey Paper Draft" by Manohar Raavi. I don't currently see any actions in canvas at this time for either paper.
